

St Thomas' Integrated Health & Care Centre

82 bed units across 3 floors; Ensuite, bariatric and studio

Intermediate Care Dementia & Specialist Care

apartments

A multi-disciplinary highly skilled workforce 'Home-First' ethos

> Showcasing technology

Therapy rooms and gym and Podium garden

8 Supported Housing Units

## Refresh of the Proposal

- A unique opportunity for partners in the system to jointly operate an 82-bed health and care facility at St Thomas' Gardens, that will provide Stockport's Intermediate Care Bed base.
- This opportunity would allow the locality system to create an innovative approach to supporting individuals in a community bedded setting that maximises their independence.
- It will consolidate the majority of intermediate care beds in one location, presenting a range of advantages for individuals and for the Stockport system.
- The system mandate for this piece of work has arisen from an Options Appraisal which gave consideration to the future operating model for St Thomas. A partnership arrangement was the preferred option.
- There is agreed commitment between Stockport Foundation Trust (SFT), Stockport Metropolitan
  Borough Council (SMBC) and NHS Greater Manchester ICB (ICB) to develop a joint and bespoke,
  integrated health and social care Operating Model that will meet the Stockport system requirements,
  whilst balancing financial viability and strategic fit.
- A formal partnership agreement between SFT and SMBC, would define the partnership's commitments and risk share for operating.
- The Council with delegated authority has agreed to enter into a construction contract.

# **Background**

- Following an Options Appraisal of potential operating models for St Thomas', a decision was made to move forward with the preferred option of a Joint Operating Model between SMBC, SFT and the ICB.
- In February 2024 an agreement was reached between partners to proceed with a Business Case to take to our prospective governance.
- An Outline Business Case was submitted and approved by SFT Board on 2<sup>nd</sup> May 2024, and SMBC Executive Leadership, with the following recommendations:
  - 1. Assurance on the operating model and how it be able to meet the needs of our population now and in the future.
  - 2. Evidence of robust demand modelling to support the operating model and capacity requirements.
  - 3. Clarification regarding future affordability and organisational liability for any future deficits in funding.
  - 4. If a joint venture is the final model, a clear understanding of organisational accountability and liability needs to be evident and agreed.
  - 5. The alternative use for Bluebell would also be of special interest.
  - 6. As part of the future governance arrangements which deliver the full business case, the Board have requested that regular updates are provided.
- A Critical Path of activities has been developed based on these recommendations that will provide responses
  to the above for the Full Business Case.

  ONE STOCKPORT

## Programme Critical Path to Full Business Case

#### Demand Modelling

Robust demand modelling.

Modelling historic bedbased data to St Thomas'.

## Operating Model

Revise operating model based on outcomes of demand modelling and further defining of cohort and pathways.

## Staffing Model

Review staffing model based on the revised operating model.

Revise staffing levels and roles to meet requirements.

Firm up GP medical model.

#### Critical Path

## Joint Venture

Agree CQC registration.

Agree type of Joint Venture; ie partnership or entity.

Develop the Heads of Terms.

#### Cost Benefit Analysis

Identify the opportunities that operating St Thomas' will bring and the associated costs.

#### Cost Model

Refine the kit out costs for St Thomas'.

Update the staffing costs following the staffing model amendments.

Update any other costs associated with operating model

#### Full Business Case

Develop a draft full business case for comments.

Finalise the Full Business Case in preparation for governance.

## **Programme Progress to-date**

- Construction of St Thomas' is now underway, with completion due in March 2027. A Press Release in North West Place magazine has recently been published.
- Work has commenced on the critical path activities focusing on responses to the recommendations for the Full Business Case:
  - The historic data modelling of D2A beds and NCTR waiting list and how the needs align with the St Thomas' Operating Model is near completion.
  - Interior design kit out requirements continue to be identified, and we are working closely with construction company and designers to progress internal design elements for the facility and operating model.
  - CQC Registration research undertaken via a similar facility in Sandwell (Harvest View). It is registered by the Council as a Nursing Home with Treat for Disease, Disorder or Injury (TDDI) for health elements.
  - Joint venture scoping with legal teams using collation of partnership risk share information has resulted in 2 potential agreement mechanism being proposed: 1. Contractual Unincorporated Joint Venture. 2. Section 75 Partnership Arrangement.
  - Quality Measures have been developed that will allow the partners to measure the success of operations. Metrics to be determined for these Measures.
  - Ongoing partnership work for the financial cost modelling, cost benefit analysis, benchmarking of bed rates, VAT liability and current costs incurred by residential settings and health and care facility
- Programme update meetings have been held to share progress on the critical path and to discuss key decision points, the most recent on 26<sup>th</sup> November 2024.

# **Next Steps**

- Continuing to deliver the activities within the Programme Plan.
- Ensuring that the Programme Plan's approach and focus will meet the requirements of the Full Business Case (FBC) and sense check and agree timeline for submission.
- Deploying resources to support delivery of the Plan; skilled and specialist roles, combined effort and aligned prioritisation.
- Further embedding of the programme's governance including pre-Board escalation routes and developing required formats for programme reporting.
- Ensuring that options for Bluebell are being considered so that the financial elements can continue to be included within the cost model.
- Finalising the CQC Registration framework so that it can be applied to the operating model and associated costs.
- Agreeing on the partnership mechanism in order to commence development of the agreement and its requirements for the FBC.

# Recommendations for Locality Board

- To note and comment on the progress to-date.
- To note and comment on the next steps.
- To note the current proposed timeline of February 2025 for the Full Business Case.
